Building Systemic Capital to Advance Addiction Recovery in Ireland

**Professor Jo-Hanna Ivers, Associate Professor in Addiction
& The Associate Dean of Civic Engagement and Social Innovation
Trinity College Dublin**

What is Recovery

Very much a grass roots approach

Evolution of response to drugs Ireland

Relatively new space

Current Strategy 2017-2025

Where has it got us?

The vision of the strategy is:

To create a *“healthier and safer Ireland, where public health and safety is protected, and the harms caused to individuals and communities by substance misuse are reduced, every person affected by substance use is empowered to improve their health and well-being and quality of life”*.

“

The strategy contains a 50-point Action Plan from 2017 to 2020 and provides the scope to develop further actions between 2021 and 2025 to ensure the continued relevance of the strategy to emerging needs into the future.

”

A Health-led Approach to Drug and Alcohol Use

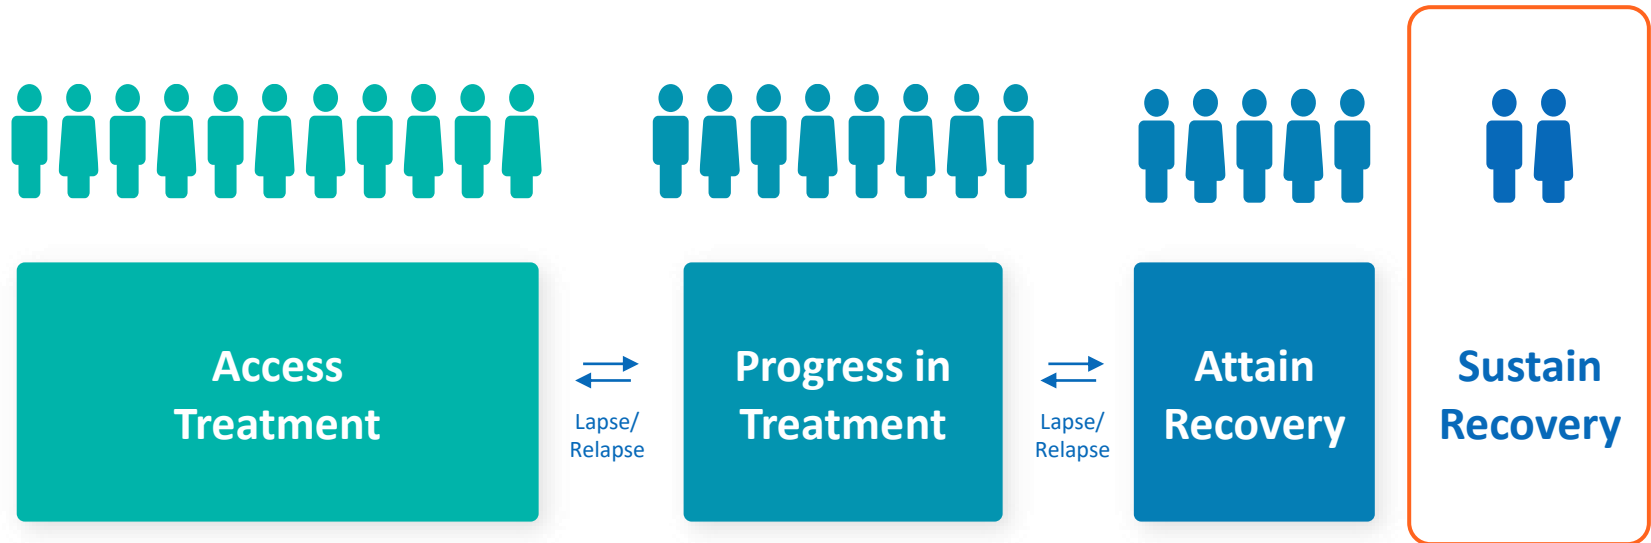

Where has it got us?

- Lots of successes in the harm reduction
- Good success with streamlining case management and common assessment tools
- A shared language and reframing of addiction as a health issue
- Aligned with the Healthy Ireland Framework

Current treatment model

Irish Context

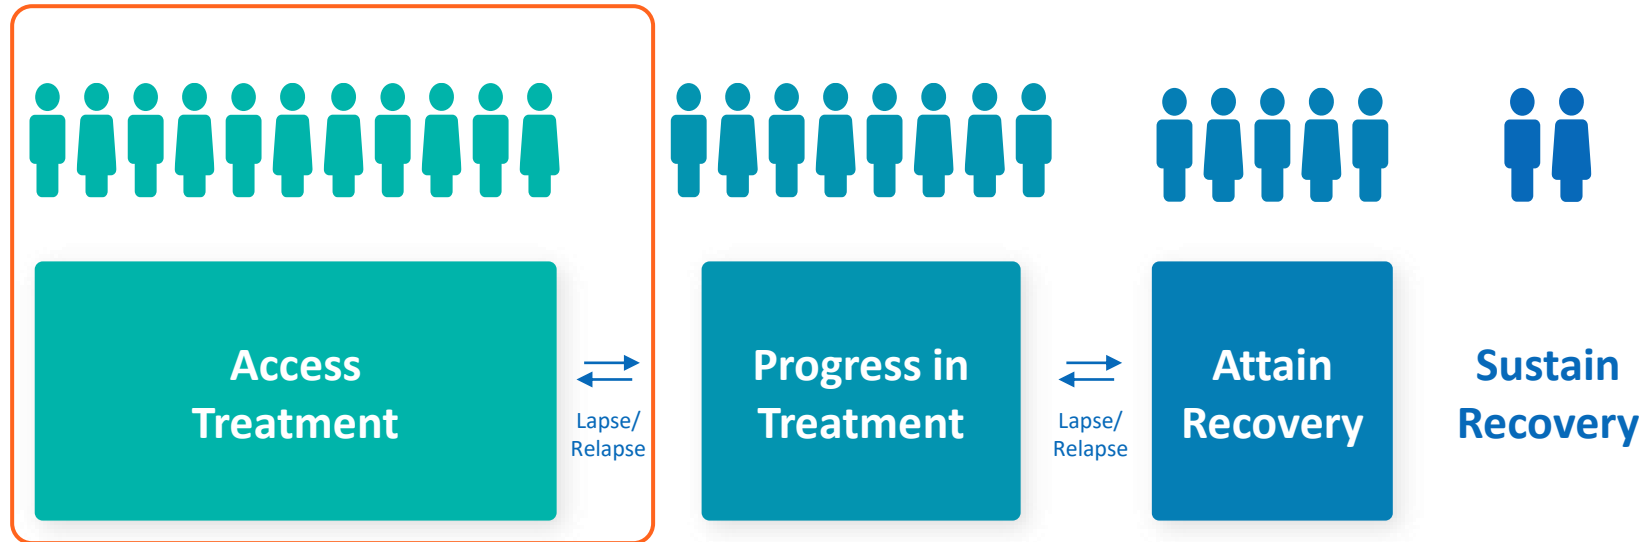

Recovery

Building capital and connection

Why are these different?

Irish Context

Why are these different?

Irish Context

They are more likely than their peers in recovery to:

- Experienced high rates of trauma
- Be a parent
- Have a co-occurring mental health issue
- Currently experiencing homelessness
- Be an early school leaver
- Have experienced high rates of unemployed

The fight for recovery capital

Scrapping for resources

Housing

Health

Education

Employment
and Training

Social
Services

Justice

We need to disrupt the system

So that everyone accessing treatment has the potential for recovery

Harnessing recovery capital

A health-led approach

Housing

Health

Education

Employment
and Training

Social
Services

Justice

It is much bigger than the access to treatment

It is not just a health issue

EQUALITY VERSUS EQUITY

In the first image, it is assumed that everyone will benefit from the same supports.

They are being treated equally by been given a place in treatment.

In the second image, individuals are given different supports to make it possible for them to have equal access to the game.

They are being treated equitably by building their individual and community capital.

Achieving equity

Health in All Policies

- ❑ *Health equity* is achieved by addressing the underlying issues that prevent people from being healthy
- ❑ Where we work, live, and play determines our health
- ❑ *Understanding that while not all government sectors have a remit in health, the policies they make directly impact health, for example, Urban Planning or Transport*

The Social Determinants of Health

Where we work, live and play determines our health

Creating Systemic Equity

Health in all policies

WHAT IS HEALTH IN ALL POLICIES?

Good health requires policies that actively support health 

It requires different sectors working together, for example:

HEALTH

TRANSPORT

HOUSING

WORK

NUTRITION

WATER & SANITATION

To ensure all people have equal opportunities to achieve the highest level of health

HOW DOES IT WORK?

Here is one example:

Worldwide

1 IN 8 DEATHS

is linked to

AIR POLLUTION EXPOSURE

Evidenced based outcomes HiAP

Improved health, sustainable approach, and cost effective

- 1. Improved population health outcomes:** Health in All Policies (HiAP) has been associated with positive population health outcomes by addressing social determinants of health, such as air pollution reduction, increased physical activity, and improved access to healthy food.
- 2. Enhanced policy coherence and sustainability:** HiAP promotes collaboration among sectors, leading to more coherent, synergistic, and sustainable policies that consider health implications across various areas.
- 3. Cost-effectiveness and economic benefits:** Implementing HiAP can generate economic benefits by preventing diseases, improving productivity, and reducing healthcare costs, while promoting healthy environments that enhance overall economic performance.

Achieving Equity in Recovery

Recovery in all policies

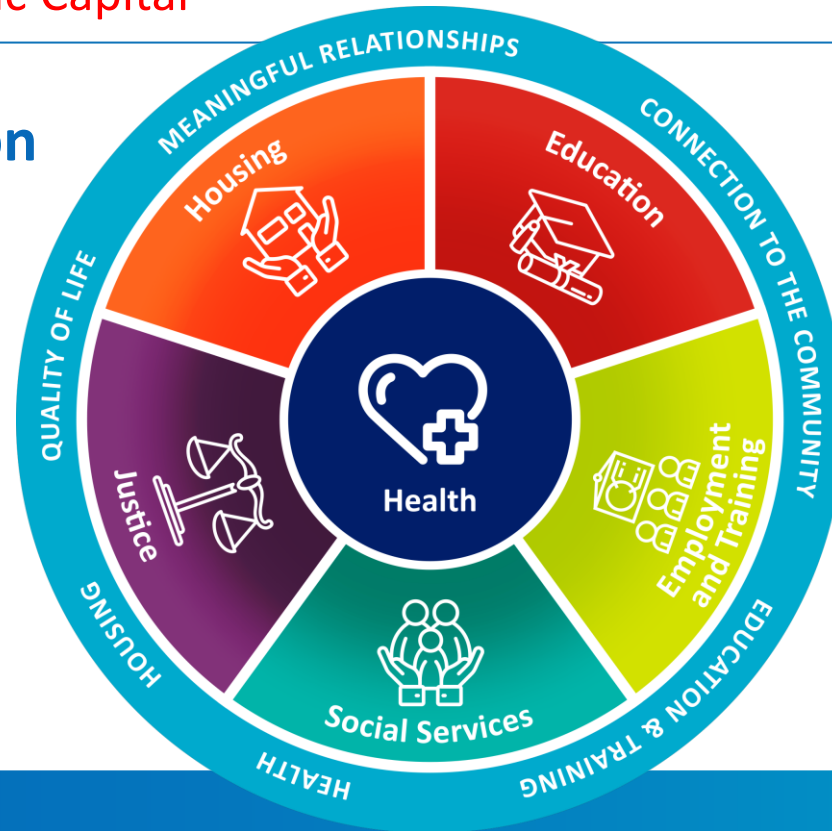

- ❑ *Recovery equity* will be achieved by addressing the underlying issues that prevent people from sustaining recovery
- ❑ Where a person works, lives, and plays will determine their recovery outcomes
- ❑ *Understanding that while not all government sectors have a remit in recovery, the policies they make directly recovery, for example, HEIs or Housing*

Recovery in all policies

Building Systemic Capital

Prevention

Recovery

What is needed for successful Implementation of HiAP

Success of HiAP depends on various factors

Political will

**Stakeholder
engagement,
resources**

**Evaluation
frameworks.**
